3 chits build up during network interruption

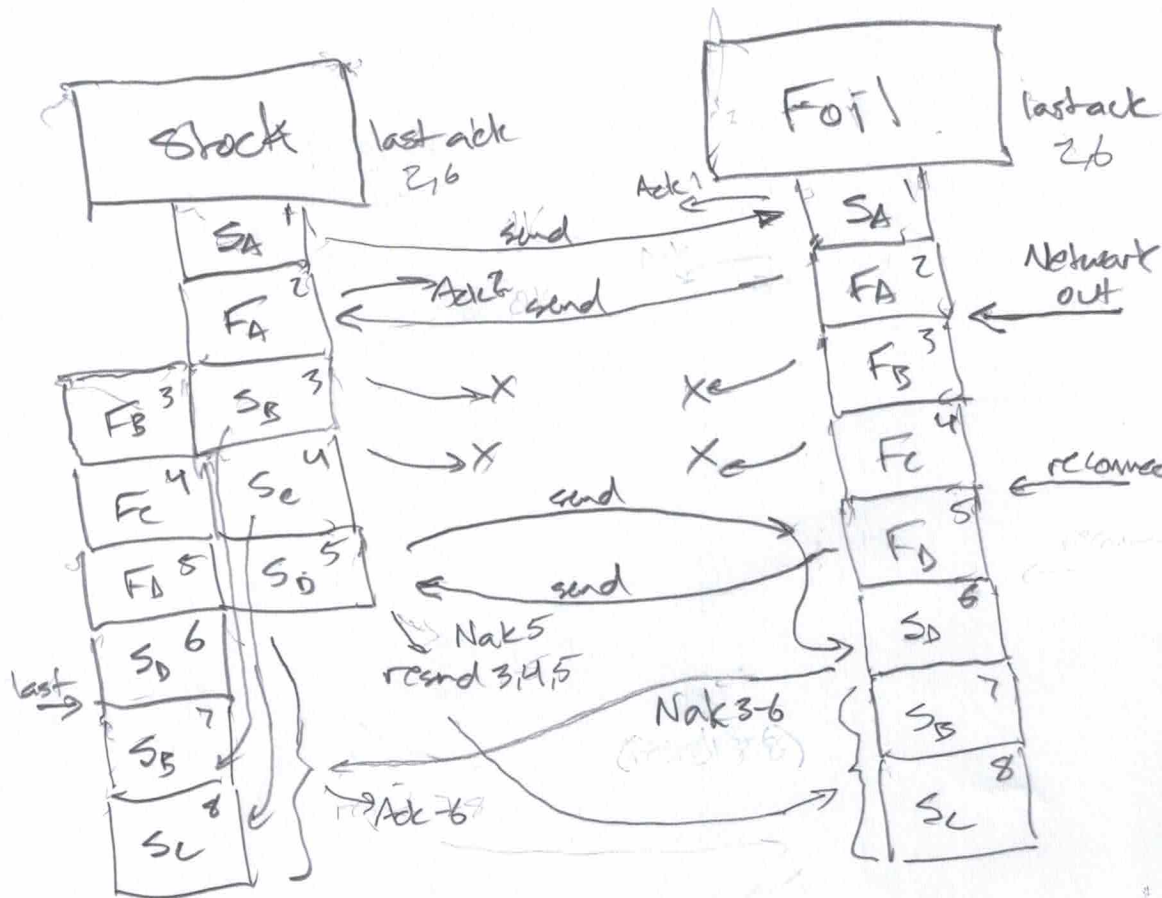

- Stock builds chain as it makes chits
- If received chit succeeds, Ack
- If received chit conflicts, insert it at specified position, mark it as confirmed index.
- If hash fails, send Nak

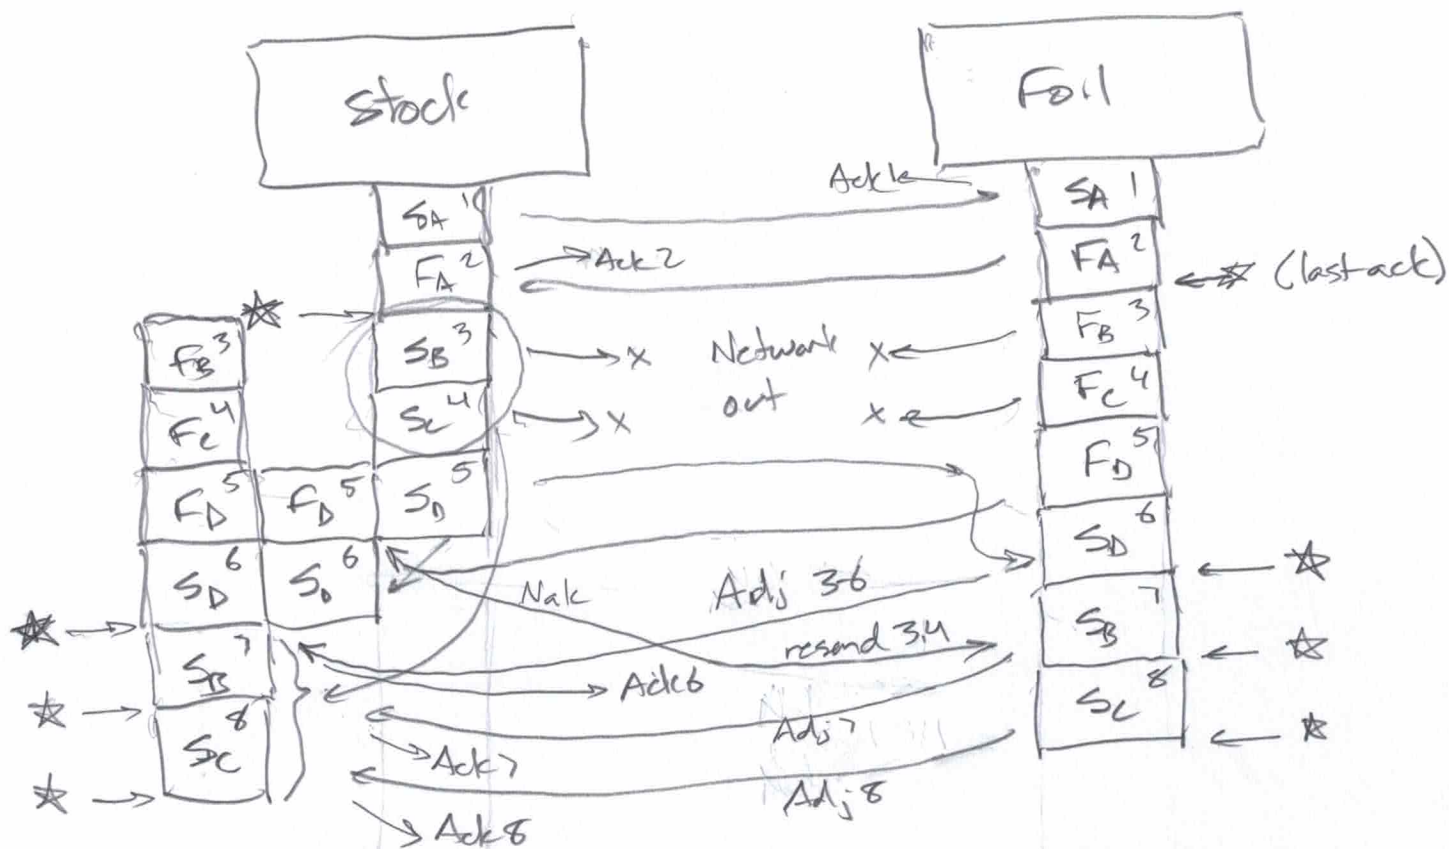

- Fail builds chain as it ^(makes or gets) gets chits
- Ack if new chit succeeds
- Append and Nak if it fails
- On Nak from Stock, send next lower block (resend)
